

introducing a system that dries hands Pronto

Features:

- Combination of an electric hand dryer and a paper towel dispenser
- 200 series dirak lock with a hooked cam
- Built-in microswitch to prevent hand dryer being activated during paper loading
- High strength hinge mechanism
- Paper towel capacity: 2pks
- Electrical connection by cord and plug or direct wiring

Specifications:

- High impact polycarbonate
- Electrical 230/240V

- Supply 50Hz AC-10AMP
- Motor 65WATT

- 2500 RPM
- Element 1.6kW protected by thermal cut-out
- Air Velocity 16.2m/s at nozzle outlet
- Noise level 65dB (A)
- Top mounting holes 1700mm from floor
- Gross weight 5.75kg
- Certificate of Suitability CS/761-Q
- Electrical Safety Requirement AS 3304-1995

Finish:

- Cover/outlet: blue etched opaque
- Main body: high gloss white

Paper towel suppliers for Pronto:

- T 1800 647 994
- T 1800 643 634

Warranty

JD MacDonald Pronto hand dryer is guaranteed against defective materials and faulty workmanship for 12 months from date of purchase, subject to being installed and maintained in accordance with the Installation and Operating Instructions supplied with the dryer.

The only system that gently & hygienically dries hands in seven seconds

Combining a paper towel dispenser with a hand dryer doesn't exactly seem like rocket science. And the benefits of such a marriage seem obvious—less paper usage and quicker hand drying. So why hasn't anybody thought of it before? Previously hand dryers were not an acceptable alternative to paper towels in areas that demanded the highest forms of hygiene, such as food preparation and health care. The main reason for this was the promotion of the traditional "wipe dry" method that was suited to busy health and hospitality workers. Even this method has its setbacks. Some of these individuals are required to wash their hands up to 70 times a day. You can imagine how tempting it might be for these hard-working and time-poor individuals to cut corners. For a number of reasons, these individuals can and often do neglect correct hand drying. That is, until now. The right combination of

a hand dryer and paper towel eradicates the problems associated with the paper towel only or hand dryer only techniques. A study conducted by infectious disease expert Dr. Thomas Miller found that this hand drying combination significantly reduced the transfer of bacteria when used to dry hands after washing*. This new approach was the origin of Pronto, a complete hand drying system where the whole was greater than the sum of its parts.

Pronto is not only one of the fastest hand drying systems in the world today, it is hygienic and is gentler on hands. Pronto achieves a balance between retaining the natural flora of the hands and the need to reduce bacterial infection in the health and hospitality industries. And let's not forget that Pronto uses less paper than conventional paper towel dispensers, dramatically reducing the cost of consumables and strain on the environment.

The process of using the new Pronto hand drying system is simple. You remove a single sheet of paper towel, place your hands directly behind the paper towel dispenser, breaking an electronic beam and activating the hand dryer. You then begin to dry hands with the paper towel, starting at the fingertips and working back towards the elbow, always keeping the area you are drying under the electric hand dryer. Once the hands are completely dry, simply

dispose of the paper towel. Seven seconds from start to finish, potentially saving up to 27 minutes of hand drying for a health or hospitality worker who may be required to wash their hands up to 70 times a day. Combine this with simple installation and you have a whisper quiet, low cost, time-saving, hygienic, environmentally-conscious, and people-friendly hand drying system. After all, lives will depend on it!

*Results are extracted from "Evaluation of the Paper Towel as a Hand Drying Material in Hygiene and Infection Control" by Dr. Thomas Miller PhD DSc and Daniel Patrick BapSc, The University of Auckland, Department of Medicine.
